

RAJENDRA DHARANIKOTA

Senior Analyst | Pricing, Product, Revenue & Risk Analytics

London, Ontario, Canada | +1 647-804-3462 | d.rajendrakamal4095@gmail.com | [Rajendra Dharanikota website](#)

SUMMARY

- Strategic Data Analyst with 7+ years of experience driving revenue analytics, customer retention, pricing strategy, and business performance across subscription based and analytics driven environments.
 - Proven track record developing scalable analytical frameworks, KPI reporting systems, and executive dashboards to support revenue growth, customer lifecycle optimization, forecasting, and strategic decision making.
 - Advanced expertise in SQL, Python, Tableau, Spark, and data modeling, with strong experience analyzing large scale customers, operational, financial, and product usage datasets to generate actionable business insights.
 - Experienced partnering cross functionally with leadership, product, operations, and commercial teams to define metrics, improve reporting accuracy, automate analytics workflows, and influence strategic initiatives.
 - Strong analytical storyteller with demonstrated ability to translate complex data into compelling narratives, scalable reporting solutions, and measurable business outcomes.
-

SKILLS

Languages & BI Tools: SQL, PostgreSQL, Python, Spark, Tableau, Power BI, Looker, dbt, Airflow, Excel

Revenue & Strategic Analytics:

Revenue Analytics, Pricing Strategy, Customer Lifecycle Analytics, Retention & Churn Analysis, Cohort Analysis, Funnel Analysis, Customer Segmentation, Forecasting, KPI, Development, Portfolio Performance Analysis, Customer Health Scoring, Predictive Modeling, Statistical Analysis, Trend Analysis

Data & Technical Skills:

Advanced SQL, CTE's, Window Functions, Query Optimization, Relational Databases, Data Modeling, ETL Concepts, Data Transformation, Data Validation, Data Profiling, Data Reconciliation, Root Cause Analysis, Dashboard Development, Reporting Automation, Data Integrity Analysis.

Business & Cross Functional Skills: cross-functional stakeholder Management, executive Communication, Business Intelligence, Analytical Problem Solving, Mentoring, Portfolio Management.

WORK EXPERIENCE

Sr. Pricing Strategy & Data Analyst | CARFAX.Inc

October 2022 – Present

- Led Strategic analytics initiatives across 3 core B2B subscription products contributing approximately 80% of company revenue, supporting pricing strategy, retention optimization, forecasting, and executive decision making.
- Partnered with commercial, product and leadership teams to analyze customer adoption, billing, lifecycle, and engagement trends to inform revenue growth and portfolio strategy.
- Design and optimize complex SQL based analytical frameworks to evaluate customer behaviour, pricing performance, renewal trends, and product adoption across large scale datasets.
- Built customer retention and revenue risk scoring frameworks that improved retention prediction accuracy 5%, enabling proactive customer preservation and expansion strategies.
- Developed executive KPI dashboards and portfolio reporting frameworks used to monitor revenue performance, customer health, product adoption, and lifecycle metrics across the organization.
- Conduct deep-dive cohort, funnel, and segmentation analyses to identify onboarding, conversion, adoption, and renewal bottlenecks throughout the customer lifecycle.
- Automated recurring analytics and reporting workflows using SQL and Python, significantly reducing manual reporting effort and improving scalability and reporting reliability.
- Performed root cause and anomaly analyses on retention, pricing, and customer performance metrics by tracing upstream and downstream data dependencies across multiple systems.
- Integrated and transformed multi source customer, transactional, and operational datasets to support strategic insights, forecasting models, and lifecycle analytics initiatives.
- Collaborated cross-functionally to standardize metric definitions, document business logic, and improve reporting consistency across enterprise reporting environments.
- Co-developed enterprise Tableau dashboards leveraged by leadership to monitor pricing performance, retention trends, portfolio health, and strategic KPI's.
- Leveraged AI assisted workflows and automation tools to accelerate SQL development, reporting generation, and repetitive analytical tasks.

Business Data Analyst | WattsWorth Analysis Inc. & Utilismart Corp

December 2020 – October 2022

- Built and optimized data pipelines using dbt, improving reliability and accessibility of large scale operational and

financial datasets for analytics and reporting.

- Automated data ingestion and transformation workflows using python, reducing manual effort by 40% and improving data refresh reliability.
- Developed KPI dashboards and executive reporting solutions to track operational performance, usage trends, and customer metrics contributing to a 10% increase in sales through insight driven actions.
- Applied data modeling and validation techniques to ensure high data quality and consistency across enterprise reporting systems.
- Partnering with clients and internal stakeholders to deliver analytics solutions supporting business operations and decision making across Ontario's energy sector.
- Created technical documentation for reporting logic, data transformation rules, and validation processes supporting long term reporting governance.

Data Analyst - Lead | Ishtriwala, Andhra Pradesh, India

July 2019 – December 2020

- Built and automated data pipelines using python and sql to support customer and operational analytics across B2B and B2C services
- Developed interactive KPI dashboards and reporting solutions to track customer demand, service usage patterns, and operational efficiency, improving visibility into customer behaviour and system performance
- Designed data validation frameworks that improved data quality and reduced reporting errors by 30%
- Enabled near real time reporting automating ingestion and transformation workflows across multiple data sources
- Applied NLP techniques like text processing, keyword extraction and sentiment analysis on customer feedback and service requests to identify anomalous patterns, high-risk interactions, recurring service issues, supporting early detection of potential fraud and misuse scenarios and improving customer retention strategies
- Worked closely with operational and business teams to translate analytical findings into actionable business recommendations.

Intern Analyst | BHEL (Bharat Heavy Electricals Limited) | Telangana, India

June 2017 – November 2017

- Conducted data analysis using SQL and Tableau to assess performance across power components
- Developed Tableau dashboards and reports supporting operational monitoring and leadership decision making.
- Assisted with data validation and reporting activities to improve visibility into operational performance metrics.

PROJECTS

Revenue Risk and Retention Prediction Model

- Built a logistic regression model to predict customer risk and retention risk outcomes using behavioural, engagement, adoption and financial features.
- Engineered customer health indicators and predictive signals supporting lifecycle analytics and retention strategy simulations.
- Evaluated model performance using precision recall optimization techniques and delivered actionable insights to support revenue preservation initiatives.

Customer 360 Lifecycle Analytics Framework

- Designed a unified customer analytics model combining product usage, billing, engagement, and lifecycle data to enable a holistic view of customer behavior.
- Built customer health indicators and retention risk signals based on behavioral, tenure, and product adoption patterns.
- Delivered dashboards and cohort analysis frameworks used to support retention strategy and lifecycle decision making.

Funnel & Retention Optimization Analysis

- Analyzed full customer journey from acquisition to renewal to identify key drop off points across lifecycle stages.
- Built SQL driven funnel models to measure conversion efficiency and identify opportunities for onboarding and retention improvement.
- Developed actionable insights that informed customer engagement and lifecycle marketing strategies.

EDUCATION

University of Western Ontario

Master of Engineering – Data Science Specialization (Software Engineering)
